

28) How many types of fragmentation occur in Operating System?

There are two types of fragmentation:

- Internal fragmentation: It is occurred when we deal with the systems that have fixed size allocation units.
 - External fragmentation: It is occurred when we deal with systems that have variable-size allocation units.
-

29) What is spooling?

Spooling is a process in which data is temporarily gathered to be used and executed by a device, program or the system. It is associated with printing. When different applications send output to the printer at the same time, spooling keeps these all jobs into a disk file and queues them accordingly to the printer.

30) What is the difference between internal commands and external commands?

Internal commands are the built-in part of the operating system while external commands are the separate file programs that are stored in a separate folder or directory.

31) What is semaphore?

Semaphore is a protected variable or abstract data type that is used to lock the resource being used. The value of the semaphore indicates the status of a common resource.

There are two types of semaphore:

- Binary semaphores
 - Counting semaphores
-
