

17) What are the different types of networks?

Networks can be divided on the basis of area of distribution. For example:

- PAN (Personal Area Network): Its range limit is up to 10 meters. It is created for personal use. Generally, personal devices are connected to this network. For example computers, telephones, fax, printers, etc.
 - LAN (Local Area Network): It is used for a small geographical location like office, hospital, school, etc.
 - HAN (House Area Network): It is actually a LAN that is used within a house and used to connect homely devices like personal computers, phones, printers, etc.
 - CAN (Campus Area Network): It is a connection of devices within a campus area which links to other departments of the organization within the same campus.
 - MAN (Metropolitan Area Network): It is used to connect the devices which span to large cities like metropolitan cities over a wide geographical area.
 - WAN (Wide Area Network): It is used over a wide geographical location that may range to connect cities and countries.
 - GAN (Global Area Network): It uses satellites to connect devices over global are.

18) What is POP3?

POP3 stands for Post Office Protocol version3. POP is responsible for accessing the mail service on a client machine. POP3 works on two models such as Delete mode and Keep mode.

19) What do you understand by MAC address?

MAC stands for Media Access Control. It is the address of the device at the Media Access Control Layer of Network Architecture. It is a unique address means no two devices can have same MAC addresses.
