

TCP/IP model uses both session and presentation layer in the application layer.

OSI Reference model uses separate session and presentation layers.

TCP/IP model developed the protocols first and then model.

OSI model developed the model first and then protocols.

In Network layer, TCP/IP model supports only connectionless communication.

In the Network layer, the OSI model supports both connection-oriented and connectionless communication.

TCP/IP model is a protocol dependent.

OSI model is a protocol independent.

47) What is the difference between domain and workgroup?

A workgroup is a peer-to-peer computer network.

A domain is a Client/Server network.

A Workgroup can consist of maximum 10 computers.

A domain can consist up to 2000 computers.

Every user can manage the resources individually on their PCs.

There is one administrator to administer the domain and its resources.
