

Specifiers	Within Same Class	In Derived Class	Outside the Class
Private	Yes	No	No
Protected	Yes	Yes	No
Public	Yes	Yes	Yes

14) What are the manipulators in OOP and how it works?

Manipulators are helping functions. It is used to manipulate or modify the input or output stream. The modification is possible by using the insertion (<<) and extraction (>>) operators. Note that the modification of input or output stream does not mean to change the values of variables. There are two types of manipulators with arguments or without arguments.

The example of manipulators that do not have arguments is endl, ws, flush, etc. Manipulators with arguments are setw(val), setfill(c), setbase(val), setiosflags(flag). Some other manipulators are showpos, fixed, scientific, hex, dec, oct, etc.

15) What are the rules for creating a constructor?

- It cannot have a return type.
- It must have the same name as the Class name.
- It cannot be marked as static.
- It cannot be marked as abstract.
- It cannot be overridden.
- It cannot be final.
