

17) How does procedural programming be different from OOP differ?

It is based on functions.

It is based on real-world objects.

It follows a top-down approach.

It follows a bottom-up approach.

It is less secure because there is no proper way to hide data.

It provides more security.

Data is visible to the whole program.

It encapsulates the data.

Reuse of code is not allowed.

The code can be reused.

Modification and extension of code are not easy.

We can easily modify and extend code.

Examples of POP are C, VB, FORTRAN, Pascal, etc.

Examples of OOPs are C++, Java, C#, .NET, etc.
