

- When the DNS server receives the query, then it resolves the query by using a cache.
 - If the DNS server is not able to resolve the query, then it forwards the query to another DNS server.
 - If the forwarder is not available, then it will try to resolve the query by using root hint.
-

14) What is NIC?

- NIC stands for Network Interface Card. It is a peripheral card attached to the PC to connect to a network. Every NIC has its own MAC address that identifies the PC on the network.
 - It provides a wireless connection to a local area network.
 - NICs were mainly used in desktop computers.
-

15) What is the meaning of 10Base-T?

It is used to specify data transfer rate. In 10Base-T, 10 specifies the data transfer rate, i.e., 10Mbps. The word Base specifies the baseband as opposed to broadband. T specifies the type of the cable which is a twisted pair.
