

33) Explain the functionality of OSI session layer?

OSI session layer provides the protocols and means for two devices on the network to communicate with each other by holding a session. This layer is responsible for setting up the session, managing information exchange during the session, and tear-down process upon termination of the session.

34) What is the maximum length allowed for a UTP cable?

The maximum length of UTP cable is 90 to 100 meters.

35) What is RIP?

- RIP stands for Routing Information Protocol. It is accessed by the routers to send data from one network to another.
 - RIP is a dynamic protocol which is used to find the best route from source to the destination over a network by using the hop count algorithm.
 - Routers use this protocol to exchange the network topology information.
 - This protocol can be used by small or medium-sized networks.
-

36) What do you understand by TCP/IP?

TCP/IP is short for Transmission Control Protocol /Internet protocol. It is a set of protocol layers that is designed for exchanging data on different types of networks.

37) What is netstat?

The "netstat" is a command line utility program. It gives useful information about the current TCP/IP setting of a connection.

38) What do you understand by ping command?
