

Object: An object is a real-world entity that has attributes, behavior, and properties. It is referred to as an instance of the class. It contains member functions, variables that we have defined in the class. It occupies space in the memory. Different objects have different states or attributes, and behaviors.

The following figure best illustrates the class and object.

---

11) What are the differences between class and object?

It is a logical entity.

It is a real-world entity.

It is conceptual.

It is real.

It binds data and methods together into a single unit.

It is just like a variable of a class.
