16) What are the differences between the constructor and the method in Java?

Constructor has the same name as the class name.

The method name and class name are not the same.

It is a special type of method that is used to initialize an object of its class.

It is a set of instructions that can be invoked at any point in a program.

It creates an instance of a class.

It is used to execute Java code.

It is invoked implicitly when we create an object of the class.

It gets executed when we explicitly called it.

It cannot be inherited by the subclass.

It can be inherited by the subclass.

It does not have any return type.

It must have a return type.

It cannot be overridden in Java.

It can be overridden in Java.

It cannot be declared as static.

It can be declared as static.

Java compiler automatically provides a default constructor.

Java compiler does not provide any method by default.
